

Juan Sebastian Plazas

AI Engineer | Fullstack Developer

PROFESSIONAL SUMMARY

Systems Engineer and current Master's candidate in Artificial Intelligence and Data Science. Developing scalable applications integrating Machine Learning, LLMs, and Computer Vision models with enterprise-grade microservices deployed across cloud infrastructures. Focused on engineering intelligent solutions designed to continuously learn, reason, and drive business growth. Proven track record in developing high-traffic systems, designing automated data pipelines, and implementing production-ready AI solutions while translating complex data transformations into actionable business intelligence dashboards.

EXPERIENCE

Periferia-Software Developer Jul 2024 – Present

- Designed and developed scalable microservices for enterprise clients, integrating Node.js, Go, and Java solutions within cloud environments.

Buscalibre-Backend Developer Jul 2023 – Jun 2024

- Developed and provided support for high-traffic e-commerce platforms using PHP, Angular, and Docker.

Cuponatic-Software Developer Jul 2022 – Jun 2023

- Implemented new features for regional e-commerce platforms using NestJS and Next.js, improving system maintainability and scalability.

TCS Tata Consultancy Services-Software Developer Aug 2021 – Jul 2022

- Built scalable microservices using Java Spring Boot and Node.js/TypeScript for telecommunications and fintech projects.

VOV Solutions-Software Engineering Aug 2019 – Jul 2021

- Developed custom software and e-commerce solutions deployed on AWS cloud infrastructure. Participated in full software development lifecycle activities, including backend development, integrations, testing, and deployment automation.

BSDC-Software Developer Jan 2018 – Jul 2019

- Developed software solutions in C++ and Qt for international trade information processing systems. Worked with PostgreSQL, MySQL, and SQLite databases in desktop-based enterprise environments.

FEATURED PROJECTS

Automated Visual Inspection System for Manufacturing (MVP)

Designed and developed a real-time visual inspection MVP for industrial quality control using Convolutional Neural Networks (CNNs) and YOLO-based object detection models with Transfer Learning techniques. The system enables automatic anomaly detection from industrial image inputs and was evaluated using performance metrics such as Precision, Recall, and F1-Score.

Monolithic to Microservices Architecture Migration

Contributed to the migration of a legacy monolithic platform into a scalable microservices-based architecture using NestJS, Angular, Docker, and AWS technologies.

CONTACT

- Cali, Colombia.

SKILLS

- Programming Stack:** Python, JavaScript, Node, TypeScript, Java, React, AWS, PostgreSQL, MySQL, MongoDB and Redis.
- AI & Data:** Machine Learning, Computer Vision, LLMs, Power BI, Data Pipelines
- Cloud & DevOps:** AWS (AWS Cloud Foundations), Docker, Terraform.

EDUCATION

- Master's in Artificial Intelligence and Data Science** UNIVERSIDAD AUTÓNOMA DE OCCIDENTE - Cali, Colombia
- Bachelor's Degree in Systems Engineering** UNIVERSIDAD DEL VALLE - Tulua, Colombia
- Technology in Agro-Industrial Processes** UNIVERSIDAD AUTÓNOMA DE OCCIDENTE - Tulua, Colombia
